Rapidlogger™

Job Monitoring System for Wireline and Slickline Units

Rapidlogger Systems designs and manufactures a line of rugged and efficient job monitoring systems for oilfield applications.

At Rapidlogger Systems we have designed and developed a range of products for use in the oilfield. Our products are extremely rugged and designed for the harsh oilfield and petrochemical environments. The Rapidlogger system enhances operational safety and improves operations through its efficiency and ease of use.

Highlights
The Rapidlogger is a compact and cost-effective system for job monitoring and recording on wireline, slickline and coiled tubing units.

It is the most efficient system available in the market today. The system is simple to use and an equipment operator can use the system without any training. Job data can be recorded on removable and upgradeable MMC/SD flash memory cards. The standard system has 12 analog data channels, 4 frequency channels. The system also has 2 high current solid state relay outputs and one analog output. The system is expandable and more data acquisition channels can be added as required.

The Rapidlogger does not need a PC for operation. However if needed it can transmit data to a PC in real time. The large internal memory can record many months of job data for future retrieval. The package is very compact and suitable for mounting in the control cabs of wireline, slickline and coiled tubing trucks.

Slickline Mode
When used in the slickline mode, the system measures, displays and records: depth, speed, line tension, wellhead pressure, and other parameters that the operator may choose. The system can also correct the depth for line stretch and thermal expansion. It can also shutdown the wireline or slickline winch with a solenoid valve based on a line over-pull condition.

The Rapidlogger panel runs a real-time embedded operating system on its rugged high-speed microprocessor. The real-time operating system allows the system to turn on instantly and be crash proof. The RapidVu is the software for graphing and preparing job reports and runs on a PC computer. It can display real-time graphs and easily prepare job reports for the operator.

Specifications
- Operating Temperature: -40°C to 70°C
- Operating Environment: NEMA 4X
- Analog Inputs: 12/24 max, 24bit
- Frequency/Depth Inputs: 4/8 max
- Digital Outputs: 2/4 max
- Analog Outputs: 1/2 max
- Display: LCD w/ Backlight
- Computer Interface: Serial, Ethernet
- Power: 12/24DC, 110/240AC
- Job Memory: 1GB
- USB Memory: 1GB
