

# Rapidlogger™

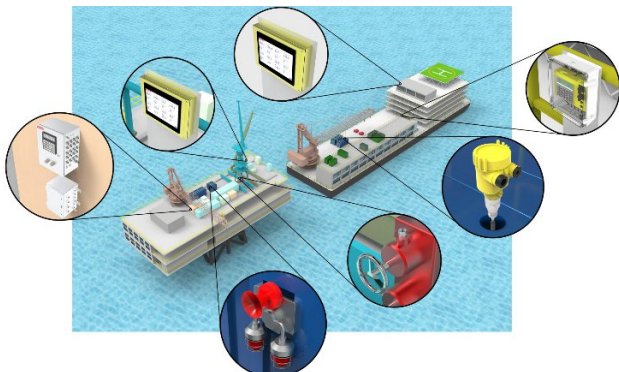

## EDR System for Workover Rigs

### Hardware

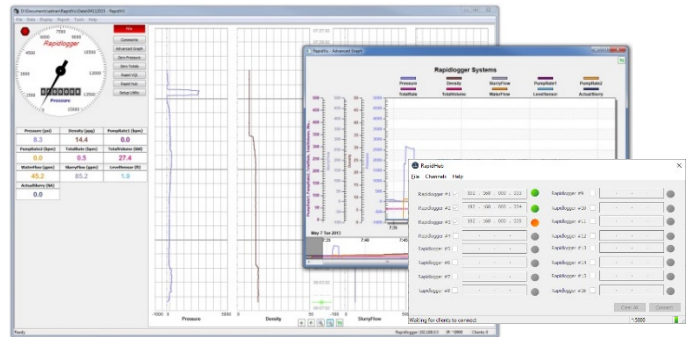

The Rapidlogger NextGen EDR System for workover rigs is an advanced rugged and reliable system for measuring, displaying, recording and charting, all of the sensor readings on a land or offshore workover rig.

System configurations are available for both safe and hazardous areas. A typical system is configured for recording multiple pump rates, pit levels/volumes, hook-load, return flow, stand pipe pressure, annulus pressures, block position and bit depth. Wired and wireless communication is supported and our accompanying data reporting software can be used to generate reports. The system is simple to install calibrate and use.

### Options

- Remote Display
- CAN BUS Interface
- Cloud Data Gateway
- Gas detectors

### Specifications

Operating Temperature  
Computer Interface

Power  
Job Memory

-40C to 70C
